Formulations

Objective:

Get Total sales by Product Categories

Prompt:

I have a product category in Column J. I have sales values in Column W. I have repetitive product categories in Column J. So I only need them once. I want the overall sales amount for each of these product categories in a different sheet.

Objective:

Get Total profit by Managers

Prompt:

I have another sheet named 'Users'. Column A has Region and Column B has Manager names. In the 'Orders' sheet, I have a column O with Region information. I do not know how to showcase the overall profits per manager level using a formula. How to do it? Profits information available in column U.

Google Sheets Apps script - Prompt:

I have a Sheet1 in which columns A to J are entered and filled by my employees. I am an auditor. I am auditing each row in this sheet. I also have Column K where the employee email address is present. In Column L whether a row is Error or Not Error. Whenever there is Error in a row for Column K, I want you to send an email to this employee for the Column K email address. Also I have comments for this row in Column M where I explained why it is an error. I have a Column N where I mentioned it as "Mail Status" so I want you to update once the email is sent then update it as 'Sent'. Give me an apps script for this task. Also add a button to my menu bar. so that I will run this script whenever needed.
